FARM PRODUCTION, DISPOSITION, CASH RECEIPTS AND GROSS INCOME OF TURKEYS,
1940-44*

This report on turkeys for the years 1940 through 1944 is one of a series of reports presenting revised estimates of farm production, disposition and income of agricultural products. Revisions in the turkey estimates are made every 5 years after a consideration of the Census enumeration and all other available data.

Turkeys Raised: These estimates are based primarily upon Census reports of turkeys raised in 1939 and 1944 (considered in relation to the total number of farms reporting turkeys) and are adjusted in line with available records of market receipts, shipments, and assessors' enumerations. Annual changes are based upon changes in numbers of turkeys on farms June 1 and August 1 as reported by turkey producers, and upon the numbers raised as reported at the end of the year.

January 1 Inventory Numbers: Inventory numbers of turkeys on farms January 1, 1940 were based primarily upon the Census enumeration of turkeys on farms April 1, 1940 adjusted for changes in numbers between January 1 and the date of enumeration. In 1945, however, the Census enumeration did not include turkeys on farms. The revised estimates of turkeys on farms January 1, 1945 were derived from the relationship between turkeys raised in 1944 and the number on hand on January 1, 1945, as reported on January 1 by crop and livestock reporters, using as a base the revised estimates of turkeys raised in 1944. Annual changes in the estimates for intervening years are based mainly on the numbers on hand as reported on January 1 by crop and livestock reporters.

Death Loss of Turkeys on Farms January 1: The estimates of the annual death loss of turkeys on farms January 1 for 1940 and 1945 are derived from the average per farm loss as reported by turkey producers, multiplied by the number of turkey farms enumerated by the Census. Annual changes are based upon changes in the average annual loss per farm as reported on February 1 each year adjusted to show changes in the number of farms between Census enumerations. These losses represent the loss of breeding stock only, since losses of other birds on farms January 1 are insignificant.

Turkeys Produced: This estimate represents the net annual farm production of turkeys, computed from the number raised during the year, less the death loss of turkeys that were on hand at the beginning of the year.

Farm Consumption: Consumption of turkeys in the households of farm producers is estimated from a series of reports received annually from crop correspondents who report how many of their own turkeys are consumed in their households. The average consumption per turkey farm was multiplied by the estimated number of farms raising turkeys.

Sales: The annual sales are equal to the estimated production adjusted for inventory changes, less the consumption in farm households.

Prices: The average value per head of turkeys on hand January 1 is based upon the values reported by crop reporters. The average annual price per pound of turkeys live weight is computed from monthly farm prices per pound and the estimated pounds of turkey sold each month.

Average Weight per Turkey Sold: The average live weight of turkeys sold is estimated from the average weights of turkey hens and toms sold during the year as reported by turkey producers at the end of the year.

Income: Cash receipts from turkeys are derived by multiplying the yearly total pounds of turkeys sold by the estimated average annual price per pound received by farmers. Gross income is cash receipts plus the value of turkeys consumed in farm households where produced. Turkey consumed at home is evaluated at the average annual farm price per pound.

*Prepared by E. Smith Kimball, Paul W. Smith, and Robert F. Moore, Agricultural Statisticians.
